

Print Tracker Announces Sales Quote Generation for Supply Ordering

Dateline – Boise, Idaho, USA

Print Tracker dealers who have invested in the Data Processor and are using the e-automate ERP system can now have sales quotes for toner automatically generated from low toner alert information gathered by Print Tracker.

“With this Print Tracker Data Processor option, toner fulfillment time can be significantly reduced,” said Print Tracker Sales and Marketing Director Brian Dawson. “This is a GREAT money-making software upgrade.”

“The Print Tracker Data Processor looks up the equipment in the e-automate database, finds the toner that needs to be shipped, and prepares a sales quote that can be quickly converted to a Sales Order,” Dawson continued.

If the necessary toner cartridge information is not found, an exception alert email is generated and sent to the supply fulfillment team so corrective action can be taken.
