

## Print Tracker Announces Integration with SAP Business One

### Dateline – Boise, Idaho, USA

Print Tracker proudly announces to its world-wide customer base that collected meter information can now be integrated into the Enterprise Resource Management software SAP Business One.

“SAP Business One is an affordable, easy-to-implement business management solution that dovetails nicely with Print Tracker’s ‘Simple. Smart. Solutions. Service.’ philosophy,” said Print Tracker President Lance Hale. “Adding SAP Business One integration to our abilities with e-automate, NextGen, Nexent’s Miracle Service, OMD, Microsoft Dynamics and others was a natural for us.”

“Print Tracker gathers imaging device meters and device status information and routes it to administrators that can take action on the collected information. Automatic integration of the collected meters into SAP Business One saves time, increases accuracy and improves efficiency,” continued Hale.

Print Tracker offers meter integration with its Data Processor software. Once installed on a server, the Data Processor automatically puts meters into SAP Business One or any ODBC compliant billing database.

The Print Tracker Data Processor retrieves meter information and links the data with the appropriate device. Validation is done to make sure the meters to be inserted are newer and higher than previous reads. Combined meters for contracts with multiple devices that are billed in blocks are automatically updated. The Data Processor notifies administrators of installations not reporting to further ensure accuracy and complete billing.

### About Print Tracker

PrintTracker™ is an MPS software solutions company. Print Tracker provides simple-to-install, intuitive-to-use MPS software solutions for the imaging device industry. Tools include meter gathering software, advanced deployment options, fast meter capture, alert generation, service and meter viewers, customized reporting, an adaptable TCO Estimator, integration of meters and alert information into a wide variety of ERP systems, and automated supply fulfillment.
